

••• COS5 film

Premium display and improved packaging efficiency in overwrap applications.

Features

- Very high gloss for extra sparkle on the shelves with good resistance to scuffing.
- Excellent stiffness for premium “gift wrap” look.
- Outstanding out-to-in (lap) sealing performance under low pressure conditions for minimal heat distortion.
- Stable surface properties, ensuring consistent packaging performance.
- High clarity OPP films using solvent-free, water-based PVdC-free coating technology.

Benefits

PROTECTION

- Good scuff resistance for optimal product protection.
- Strong OPP mechanical properties to avoid tear of protective overwrap (OW) film.

PERFORMANCE

- Extremely high gloss for premium shelf display.
- High clarity of transparent base film for optimal product display.
- Perfume spray resistant side ensures durable shelf display.

PROMOTION

- Outside durable coating provides stable surface and sealing properties for optimal overwrap performance.
- Very good low-pressure seal (LPS) performance of coatings gives outstanding machinability for box overwrap applications.

⋮ COS5 film

Bicor™ COS5 transparent biaxially oriented polypropylene (OPP) film from Jindal Films features a special scuff resistant coating on one side and an acrylic coating on the reverse, providing an excellent balance seal of visual, sealing and packaging performance.

The innovative coatings (PVdC free) provide stable surfaces for reliable and constant slip, as well as excellent optical and sealing properties to deliver great protection, promotional and packaging performances. With high gloss and good scuff resistance, the perfume spray resistant coated side is also resistant to humidity and typically used on the outside of the overwrap. Both coatings provide excellent low-pressure lap sealing performance for cosmetic OW applications.

The coatings have been designed to enhance packaging performance for optimal overwrap machinability in the following market segments :

- perfumes & fragrances
- health & beauty aids
- cosmetics
- various other clear overwrap applications

Traditional acrylic coatings react with the alcohol in perfumes and fragrance products, but the **new scuff resistant coating** on the outside of COS is unaffected and retains its gloss and sparkle.

TRADITIONAL ACRYLIC COATING (MB666)

PERFUME SPRAY RESISTANT COATING (COS5)
